Interview   

Who we are

Collaborative. Respectful. A place to dream and do. These are just a few words that describe what life is like at Toyota. As one of the world's most innovative companies, Toyota is growing and leading the future of mobility through innovative, high-quality solutions designed to enhance lives and delight those we serve. We are looking for talented team members who want to Dream. Do. Grow. with us.

An important part of the Toyota family is Toyota Financial Services (TFS), the finance and insurance brand for Toyota and Lexus in North America. Voted Best Financial Services Company in North America, it is an essential part of this world-changing company- delivering on Toyota's vision to move people beyond what's possible. We will help create best-in-class customer experience in an innovative, collaborative environment.

To save time applying, Toyota does not offer sponsorship of job applicants for employment-based visas or any other work authorization for this position.

Hi! Are you interested in this job? 

 I'm interested

 Ask a question

Who we're looking for

At TFS, we're building next-generation products that redefine mobility for millions of customers worldwide. We're looking for a **Sr Software Engineer** individual contributor who brings deep backend expertise, strong full-stack instincts, and the technical chops to deliver high-quality systems end

This role is for an engineer who thrives in the code: the one who builds reliable services, debugs the hard problems, contributes to architecture design, consistently raises the quality bar for the team. You'll work closely with your team, take ownership of complex features, and help shape how we build

This position is based in Plano, TX. The selected candidate will be expected to reside within a commutable distance of this location.

Key Responsibilities

- Design, build, and maintain full-stack features — from APIs and serverless services to the data models and event-driven workflows that power our products
- Lead technical design reviews, architecture discussions, and RFC processes — driving alignment across engineering teams
- Identify and resolve systemic issues: performance bottlenecks, reliability gaps, scaling constraints, and tech debt that slows teams down
- Own complex debugging and troubleshooting across the full stack — from API latency to infrastructure misconfigurations to distributed system issues
- Follow and contribute to engineering best practices: code quality, testing strategies, observability, and deployment safety
- Collaborate closely with Engineering Managers, Product, and Front-End Engineering to shape roadmaps and ensure technical feasibility
- Proactively communicate technical risks, tradeoffs, and recommendations to both engineering and non-technical stakeholders

What you bring

- Bachelor's degree in Computer Science or related field, or equivalent practical experience
- 5+ years of software engineering experience with a strong backend or full-stack focus
- Deep expertise in designing and building **serverless architectures on AWS**, including:
 - **Lambda** for compute
 - **API Gateway** (REST and HTTP APIs) for service exposure
 - **DynamoDB** or **Aurora Serverless** for data persistence
 - **Step Functions** or other workflow orchestration tools
 - **EventBridge**, **SQS**, or **SNS** for event-driven and async communication
 - **S3** for object storage and data lake patterns
 - **CloudFront** for API acceleration and edge caching
- Strong proficiency in **TypeScript** and/or **Python** for backend services — you default to production-quality code and advocate for it across the codebase
- Proven ability to design, build, and maintain **RESTful and GraphQL APIs**, including API contract design, versioning, error handling, and type-safety (e.g., OpenAPI, GraphQL Code Generator, tRPC)
- Solid understanding of **Infrastructure as Code** using **AWS CDK**, CloudFormation, or Terraform
- Experience with **observability and monitoring** tooling: CloudWatch, X-Ray, Datadog, or similar — you know how to instrument services, trace distributed requests, and respond to incidents
- Strong understanding of **security best practices**: IAM policies, least-privilege access, secrets management (Secrets Manager, SSM Parameter Store), and encryption at rest and in transit
- Deep experience debugging complex issues across distributed systems — network traces, distributed tracing, log analysis, and profiling
- Experience with testing at all levels: unit, integration, contract, and load testing for distributed systems
- Familiarity with **containerized workloads** (ECS Fargate, Docker) for services that don't fit the serverless model

- Strong written and verbal communication — you can write a clear RFC, lead a design review, and explain a complex tradeoff to a non-technical

Added bonus if you have

- Master's degree in Computer Science or related field
- Experience in the financial services, banking, or insurance industry
- Experience designing **multi-account AWS architectures** with proper governance and guardrails (AWS Organizations, Control Tower)
- Familiarity with **data streaming** patterns using Kinesis, MSK (Managed Kafka), or similar
- Experience with **GenAI integration** on the backend (e.g., Bedrock, SageMaker endpoints, LLM orchestration patterns)
- Experience with **CI/CD pipelines** and deployment automation (CodePipeline, GitHub Actions, or similar)
- Hands-on experience with **GraphQL federation** or API gateway patterns for composing multiple services
- AWS certifications (Solutions Architect, Developer Associate, or DevOps Engineer)
- Experience contributing to or maintaining open-source projects
- Experience defining engineering standards, writing ADRs, or leading org-wide technical initiatives

What we'll bring

During your interview process, our team can fill you in on all the details of our industry-leading benefits and career development opportunities. A include:

- A work environment built on teamwork, flexibility, and respect
- Professional growth and development programs to help advance your career, as well as tuition reimbursement
- Team Member Vehicle Purchase Discount
- Toyota Team Member Lease Vehicle Program (if applicable)
- Comprehensive health care and wellness plans for your entire family
- Toyota 401(k) Savings Plan featuring a company match, as well as an annual retirement contribution from Toyota, regardless of whether you cor
- Paid holidays and paid time off
- Referral services related to prenatal services, adoption, childcare, schools, and more
- Tax-Advantaged Accounts (Health Savings Account, Health Care FSA, Dependent Care FSA)

Belonging at Toyota

Our success begins and ends with our people. We embrace all perspectives and value unique human experiences. Respect for all is our North Star. We are proud to have 10+ different Business Partnering Groups across 100 different North American chapter locations that support team members' effort and grow without questioning that they belong.

Applicants for our positions are considered without regard to race, ethnicity, national origin, sex, sexual orientation, gender identity or expression, religion, military or veteran status, or any other characteristics protected by law.

Have a question, need assistance with your application or do you require any special accommodations? Please send an email to talent.acquisition (mailto:talent.acquisition@toyota.com).
